Instructions for Enhanced Classrooms Using Touch Controls

In this room you will find:
- Touch control panel
- Hookups for a laptop
- Desktop computer
- DVD/VCR player
- Document camera
- Ceiling-mounted projector
- Sound system

For laptops—make sure to connect all the cables from the cable well before powering the laptop on. If you are not getting an image on the screen, first check that LAPTOP is selected on the wall panel. Then hold the Fn key and push the function key that says “CRT/LCD” or has a picture of a monitor. If you still cannot get an image, please call Media Services at 864-7120.

Volume control is maintained with the volume dial on the touch panel. If you are using a laptop, please make sure the master volume on the laptop is maxed out. If you are using the DVD/VHS player, please turn down the volume before you press play.

There is a BACK button in the lower right-hand corner of every screen that will take you to the previous screen.

There is extra power located in the cable well.

**Please press SYSTEM OFF at the end of your class!**
