Instructions for Standard Classrooms with Projectors using Remote Control

In this room you will find:

- Remote control
- Hookups for a laptop computer
- DVD/VCR player
- Ceiling-mounted digital projector
- Sound system

For laptops—make sure to connect all the cables before powering the laptop on. If you are not getting an image on the screen and have pressed COMPUTER on the remote control, first check that LAPTOP is selected on the remote control. Hold the Fn key and push the function key that says “CRT/LCD” or has a picture of a monitor. If you still cannot get an image, please call Media Services at 864-7120.

- Volume control is maintained with the volume buttons on the remote control. If you are using a laptop, please make sure the master volume on the laptop is maxed out. If you are using the DVD/VHS player, please turn down the volume before you press play.

Please turn the projector off at the end of your class!

Press the ON-OFF button on the remote twice.
